APPENDIX A: TECHNICAL SPECIFICATIONS FOR TEST PUMPING PACKAGE

TECHNICAL SPECIFICATIONS FOR TEST PUMPING PROPOSALS PACKAGE

FR:	Warren Grafton, P.Geo. (Western Water on behalf of the City of Quesnel)	REFERENCE:	24-001-01PG
RE:	TEST PUMPING OF NEW TEST WELL: CITY OF QUESNEL TW11		

1.0 Introduction

This document provides technical specifications to test pump one new 16-inch (400 mm) diameter test well for the City of Quesnel, B.C. (CoQ or “the City”). This document includes information on:

- Project background
- Well location
- Expected well completion details
- Technical specifications – Test pumping

Attachments to these technical specifications include:

- A. Well Site Plan
- B. Monitoring Wells and Discharge Piping Layout with Elevation Profile
- C. Completion Schematic for TW11

Other Considerations:

- Mandatory Driller or Pump Installer Registration – Prospective proponents must supply personnel qualified by the BC Ministry of Environment and Climate Change Strategy for pump installation. All work will be completed in accordance with standards outlined in the *BC Groundwater Protection Regulation (2016)*.

2.0 Project Background

The City obtains its municipal water supply from six wells located in the North (PW8 and PW10), West (PW3, PW6 and PW7) and Central (PW9) regions of the City. A new test well (TW11) was drilled in June 2024 in the West region which will undergo a pumping test program as specified in this document. If testing is successful it is intended to be transitioned to a production well. A smaller-diameter test well (TW2015-1, Well Plate ID (WPID) 41722) was drilled at the TW11 site back in 2015. A monitoring well (EB2015-1, WPID42231) is also located near the new well. Several other monitoring wells are installed in the area, some of which will be monitored during the pumping test program. Locations of onsite wells are shown on attached Figures 1 and 2, and Figure 2 also shows locations of select monitoring wells.

3.0 Project Well Location

TW11 is located at 616 Baker Drive in Quesnel, B.C. A fenced dog park and a parking lot providing access to public walking trails are located at the well site. TW11 is located in a grassed field to the south of the fenced

park and to the west of the parking lot. Photo 1 below shows the well site and Figure 1 identifies key site features.

Photo 1: TW11 Site (looking northwest).

4.0 Expected Well Completion and Discharge Water Management Plan

TW11 is 48.6 m bgs (below ground surface) deep with an 8.2 m long well screen assembly. A completion schematic for TW11 is provided as an attachment.

Pumping test discharge water will be routed from the well site toward the Fraser River. Attached Figure 2 shows the proposed routing of the discharge piping as well as an elevation profile of the proposed discharge route. Piping coming from the well head will need to cross the access road to site in a manner that allows vehicles to cross the piping, then will need to be routed along the north side of Baker Drive within a roadside ditch until it reaches a public park. A small incline exists between the site and the park. Piping will cross the park from the northwest to the southeast. A steep embankment (Photo 2) lies to the southwest of the park down which the piping will be installed. From there piping will be routed along Foster Avenue and installed into a manhole at the east end of Foster Avenue. The manhole leads to a culvert that lies beneath North Fraser Drive and discharges to the Fraser River. Discharge piping will need to be installed into the manhole such that discharge water will flow through the culvert and to the discharge point on the Fraser River (Photo 3). Measures to prevent erosion will need to be put in place at the discharge point on the Fraser River.

5.0 Technical Specifications – Test Pumping

The following section outlines requirements for the pumping test program on the new well.

- **Pumping test duration and flow requirements** – The target capacity of TW11 is 70 L/s (1,110 USgpm). The pumping test program can be expected to occur over the range of 38 to 76 L/s (600 to 1,200 USgpm). Testing on the newly completed well is anticipated to consist of:
 - Four 60-minute steps at rates of approximately 38, 54, 69 and 76 L/s (600, 850, 1,100 and 1,200 US gpm), followed by water level recovery monitoring.
 - Assume 4 hours of monitored water level recovery following the step test. The constant rate test to follow can commence after water levels have recovered to 95% of pre-test levels.
 - A 72-hour constant rate test at a rate of 70 L/s (1,110 US gpm), followed by monitoring of water level recovery.
 - Assume a minimum of 8 hours of monitored water level recovery following the constant rate test, before which the test pump cannot be removed (unless water levels have recovered to 95% of pre-test levels).
 - During testing, water levels in designated observation wells at the site and nearby are to be monitored manually, at frequencies to be provided by WWAL. Wells to be monitored include the test well and onsite monitoring well (TW2015-1 and EB2015-1) and offsite MW2015-14 (Figure 2).
- **Water Management** – Discharge of test water shall be routed as described in Section 4.0 (see Figure 2) using discharge hose or piping provided by the contractor. Approximately 700-800 m of piping and/or hoses will be required. The discharge will ultimately drain to the Fraser River. Measures to prevent erosion shall be in place at the discharge location on the Fraser River.

Note: Super-chlorinated water initially present in the well following disinfection must be de-chlorinated and discharged to ground in the grassed area at the site until chlorine concentrations drop to less than 0.2 ppm. Measures shall be in place to prevent erosion and excess runoff from the site while discharging to ground.

WWAL will be responsible for obtaining any necessary temporary discharge permits from the Province.

- **Equipment** – The contractor will supply all equipment necessary to complete the works, including all discharge hose/piping and a generator for power supply. The price of fuel and generator rental must be included in the hourly unit rate for the test pumping.

Discharge shall be measured with a flow meter and evidence of a recent calibration of the flow meter must be provided.

Two 1-inch diameter PVC sounding tubes must be installed in the pumping well to the depth of the top of the test pump. A hose-bib style sampling tap is also required at the wellhead for the collection

of water samples. A Rossum Sand Tester shall be installed per the manufacturer's instructions on the well head discharge line for measuring sand content during the step tests and during the constant rate test (if needed).

- **Submersible Test Pump Installation** – It is assumed that the test pump will be installed to a depth of approximately 1.5 m (5 ft) above the well screen. A set depth of approximately 38 to 40 m (125 to 131 ft) below ground is anticipated. The well shall be disinfected again upon test pump removal.
