Appendix F	Historical Precipitation Data Charts for the Quesnel Area (Figures F1 to F4)
Appendix G	Data Comparison Charts (Figures G1 to G9)

1.0 INTRODUCTION

AMEC Environment & Infrastructure, a division of AMEC Americas Limited, (AMEC) has carried out instrumentation monitoring in West Quesnel as part of the ongoing West Quesnel Land Stability Program. The purpose of the instrumentation monitoring was to track landslide related ground movements, groundwater conditions and precipitation.

Various sets of Global Positioning System (GPS) ground surface movement hubs have been established in the field and surveyed between 1998 and 2012. Beginning in the year 2000, AMEC installed several phases of slope inclinometers, piezometers, trial pumping wells and trial horizontal drains. Urban Systems, from Kamloops, BC, also installed a weather station in West Quesnel, to record local precipitation and temperature data.

This report is intended to summarize the data collected during 2012 for all pre 2012 instrumentation and provides an update on observed trends or interpretations that have developed or changed since our 2011 Annual Monitoring Report, dated 18 January 2012.

Please note that beginning in mid 2012 a full scale sub-surface dewatering system was installed and is gradually being brought on line. The system consists of 14 new pumping wells, 10 new horizontal drain fan locations, 2 new in-place slope inclinometers and 14 new piezometer (monitoring well) locations along with additional data acquisition and telemetry. For ease of comparison to previous years, this annual report does not include data specific to the new 2012 dewatering system installation and associated monitoring equipment. However, some changes to our data chart configurations have been made in anticipation of including such additional data from new installations in future annual reporting. The specific details of the 2012-2013 system installation and monitored conditions will be reported on separately.

For detailed background information including geology and project history, the reader is referred to previous AMEC reports, including our previous annual monitoring reports, the Trial Dewatering Report dated May 2008 and the West Quesnel Land Stability Study Report dated May 2007.

2.0 GPS MOVEMENT HUBS

Beginning in September 1998, FortisBC (formerly Terasen Gas and BC Gas) installed and monitored a series of GPS surface movement hubs. Subsequently, in 2001, 2006 and 2008, the GPS hub network has been expanded and modified such that a current total of 47 hubs are monitored. The monitoring consists of comparing changes in the specific positions of the defined survey reference points versus time as measured periodically by survey contractors (most recently McElhanney Consultants Limited), retained by both FortisBC and AMEC on behalf of the City of Quesnel. Surveys are typically conducted on a quarterly basis with the results forwarded to AMEC. In 2011 Fortis arranged for installation of some additional closely spaced GPS hubs that are monitored periodically in conjunction with UBC for a research project, and are not generally monitored nor reported on herein.

During 2012, quarterly GPS monitoring was carried out in April, July, September and December on the GPS hubs established in 1998, 2001, 2006, and 2008. No new readings were taken on the FortisBC hubs installed in 2011 (GPS Hubs 11-50, 11-51, 11-52, Baker). For the portion of the GPS monitoring network determined to be within the area of identified landsliding, the rates of movement and total movement recorded in 2012 were higher than those recorded in 2010 and 2011, but were slightly less than those observed in 2008 and 2009.

An overall summary table and detailed individual plots of movements for all GPS hubs are provided in Appendix A. Please note that while both horizontal and vertical movement data is recorded, typically vertical GPS survey data has at least one order of magnitude less accuracy than the horizontal data. Accordingly, while there are some general trends that can be observed regarding vertical and/or the resultant of both horizontal and vertical movement, the following discussion refers primarily to horizontal movement information.

The GPS movement hubs can be broken into 4 general categories based upon their location and displacement. The first category represents benchmark hubs, which are used to provide reference control for the survey. These benchmarks are theoretically located outside the slide area on stable ground and have recorded little, if any, movement since installation. The exceptions to this are survey tolerance variations that may suggest minor movement (typically less than 15 mm of total horizontal movement over the life of the survey). While there have been as many as eight benchmark hubs, typically only two (GPS Water Tank: City concrete water tank and GPS 01-38: Terasen Pump Station, Red Bluff) have been utilized to gauge the accuracy of the survey data.

The second category consists of 13 hubs that are at or near the eastern extremity of the slide area and are used to define the approximate toe area or likely eastern boundary of active landslide movement. Generally, total horizontal displacement less than 15-20 mm is interpreted to mean that the location is beyond the active movement toe area. Higher values suggest that the hub is on or very near the toe of the slide.

The third category consists of three hubs that are located at or near the upper west portion of the slide, in order to try to confirm the western extent or crest of the slide. Similar to the toe area, total horizontal displacement less than 15-20 mm have been used as representative areas outside the area of active movement.

The fourth category involves the remaining 33 GPS hubs that are interpreted to be within the main body of the landslide. These hubs have shown significant movements over the course of the 14 years that the 15 oldest hubs have been monitored. The total horizontal movement, measured since September 1998 for these 15 oldest hubs, ranged from 290 to 635 mm.

Following much higher than average movements in 2008 and 2009, movement was relatively limited in 2010 and 2011 but showed an increase again in 2012. Total horizontal displacement for 2012 ranged up to 59 mm, depending on the hub location. This was more than the typical long term average of approximately 26 to 55 mm per year, and only slightly below the rates observed in 2008 and 2009. Table 1 presents cumulative, annual, and peak horizontal movement data typical of monitoring locations in the middle of the study area (GPS Hub 98-17) from 1998 to 2012. Figure A1 attached below and in the Appendix A, graphically shows the cumulative movement data presented in Table 1.

Table 1: Typical Horizontal Movement (from GPS Hub 98-17) from 1998 to 2012

Year	Cumulative Movement (mm)	Annual Movement Rate (mm/yr)	Peak Movement Rate (mm/yr)*
1998	16**	n/a**	66
1999	96	80	115
2000	163	67	110
2001	225	62	75
2002	279	54	83
2003	300	21	23
2004	322	22	22
2005	409	87	75
2006	423	14	75
2007	447	24	43
2008	506	59	160
2009	574	68	216
2010	580	6	56
2011	588	8	107
2012	635	47	93

*Note: Peak movement rate typically observed during the spring.

**Note: GPS Hub initialized in September 1998.

Figure A1: Hub 98-17 Total Horizontal Ground Movement

Figure 1 provides an updated vector movement map for GPS hubs monitored in the West Quesnel area. AMEC simplified the GPS vector plots in Figure 1 to show relative magnitude and azimuth of latest total vector. Intermediate movements are approximated. Details for individual GPS movement hubs and intermediate movement vectors are located in Appendix A.

Figures 2 to 18 show contour plots of total and annual GPS hub movement data selected over different time periods (which also means that only hubs used during the entire time period are included in the contour process) and over different components (i.e. horizontal movement, vertical movement and resultant three dimensional (3D) movement). The ground movement contours were drawn using triangulation in Autodesk Civil 3D (2010). Please note that these are simplified contours, and that not all the cumulative movements are necessarily in the same vector direction.

Figure 2 shows total horizontal movement between September 1998 and December 2012, for the GPS hubs installed in September 1998. Significant movement has been observed at the GPS hubs within the slide mass since 1998. A total horizontal movement of 635 mm has now been detected at GPS Hub 98-17 (corner of Bettcher St. and Lark Ave).

Figure 3 shows total horizontal movement between December 2001 and December 2012, for the GPS hubs installed in September 1998 and December 2001. Figure 4 shows total horizontal movement between November 2006 and December 2012, for the GPS hubs installed in September 1998, December 2001 and November 2006. All three figures show that the greatest horizontal movement has generally occurred in the middle of the slide area.

Figure 5 shows total vertical movement between November 2006 and December 2012. This contour plot shows downwards movement along the upper, north and west edges of the slide (typically near the scarp area, although it should be noted that there are very few hubs in this area to properly define the scarp area separately from the main body of the slide). There were also some observed upwards movement trends (thrusting/bulging) near the toe of the slide. A significant bulge related to toe thrust movements of the slide has been detected on Lewis Drive, just east of Healy St.

Figure 6 shows total 3D movement between November 2006 and December 2012. As in Figure 4, the largest movements have generally been observed in the middle of the slide area.

Figures 7 through 18 show annual horizontal movement and annual 3D movement respectively for the years 2007, 2008, 2009, 2010, 2011 and 2012 (2 figures per year). During 2007, relatively little movement was recorded by the GPS hubs with total horizontal movement typically being between 10 to 30 mm (see Figure 7) and total 3D movement between 10 to 50 mm (see Figure 8). In 2008, significantly more horizontal movement occurred than in 2007 and 3D movement increased as well. Up to 60 mm of horizontal (see Figure 9) and 60 mm of 3D movement (see Figure 10) was observed in 2008. Total horizontal (see Figure 11) and 3D movement (see Figure 12) increased again in 2009 with up to 70 mm observed in both categories. These figures suggest that the slide accelerated in those two calendar years. In 2010, reduced horizontal and 3D movements, only up to 20 mm (see Figure 13) and 30 mm (see Figure 14), respectively, were observed. This pattern of reduced movement was again observed in 2011, with less than 21 mm of horizontal movement (see Figure 15) and less than 22 mm of 3D movement (see Figure 16) being detected. The differences in annual movements between the relatively low activity years of 2007, 2010 and 2011, as compared to higher movement years of 2008, 2009, and 2012 are attributable to differences in antecedent precipitation that influences the groundwater pressures within the landslide area (see Section

7.0 for more details on precipitation data and Section 8.0 for a discussion on the relationships between precipitation, groundwater pressures and ground movement).

3.0 SLOPE INCLINOMETERS

A total of fifteen slope inclinometer (SI) casings were installed by AMEC in West Quesnel, between November 2000 and August 2006, to monitor depths and rates of subsurface lateral ground movements. Installation details and the results of previous SI monitoring are described in previous AMEC reporting. In mid-2009, the remaining slope inclinometers subject to active movement sheared off. Currently, there are only two remaining functional installations, however these installations have been judged to be too shallow to intersect the underlying slide surface and are not useful for monitoring overall slide movements. In 2012 the one of the two remaining functional installations (SI8) was resurveyed, however no significant change was noted from previous measurements. The summary table, and slope inclinometer readings of the SI installations can be found in Appendix B. Figure 1 provides a vector movement map for the slope inclinometer monitoring from previous years.

In 2012, as part of the monitoring package for the full scale dewatering program, two real time in-place slope inclinometer strings were installed across the approximate depths of previously detected sub-surface landslide failure surfaces. These in-place inclinometers should allow determination of movement rates in real time. Fuller descriptions and results for these installations will be provided in future reporting.

4.0 PIEZOMETERS

Two general types of piezometers (with three different installation configurations) have been utilized in West Quesnel to monitor groundwater levels. Standpipe type piezometers generally consist of vertical pipes (plastic or steel) with openings (slots or screens) at depth that admit groundwater from the surrounding ground. The slotted screen sections of the standpipe piezometers are typically surrounded by a sand pack and have a bentonite seal both below and above the sand pack. Water levels are usually read manually (typically quarterly) using a manual water level dip tape. The second type of piezometer used in West Quesnel is a vibrating wire piezometer (VWP), an electronic water pressure sensing device that is installed directly in the ground via grouting in a borehole in order to continually and remotely detect groundwater pressure. The vibrating wire piezometers measure water pressure at the specific depth of their tip and provide a more rapid response in some cases since appreciable volumes of water are not required to move into or out of the instrument as with the standpipe piezometers. There are also a number of hybrid installations, i.e. standpipes and pumping wells that have been retrofitted with vibrating wire piezometer sensors suspended inside the pipes for automated electronic detection of water levels.

In 2012, water levels in seven of nine standpipe piezometers were measured quarterly, using a manual water level dip tape. Two of the standpipe piezometers had been previously damaged and/or plugged at depth. The remaining standpipes do not show any notable deviations from the norm and as they are read quarterly, no significant trend can be established from them. Being relatively unresponsive, the measurement of the remaining manual standpipes will be discontinued in 2013.

Four standpipes have been retrofitted with vibrating wire piezometer transducers installed inside the standpipes. Another 48 vibrating wire piezometers were grouted directly in the ground to various depths at 21 different locations. The locations of the various piezometer installations are shown on Figure 17. With the exception of VWP18B at BH18B (no longer responds with valid data), all the vibrating piezometers are serviceable and monitored, although some intermittently indicate dry (zero pressure) conditions.

All of the vibrating wire piezometer sensors are connected to Campbell Scientific data loggers. These data loggers are used to automatically record sensor water pressures at set intervals and can store large quantities of data. The Campbell Scientific data loggers have been connected to cellular modems, so that near real time data can be collected and accessed remotely by AMEC staff. In 2012, vibrating wire piezometer at BH4 VWP which was previously connected to a Slope Indicator mini logger was modified and connected to a Campbell Scientific data logger.

A summary table of the piezometers, along with their groundwater levels (phreatic surface elevation plots) can be found in Appendix C. Depending on the location of the various piezometers, they depict various short and long term groundwater levels or pressure conditions within the West Quesnel area. Some near surface installations are more sensitive to seasonal precipitation trends, short term weather events and potential water service line breaks. Deeper installations tend to show longer term background trends and subdued seasonal response indicative of larger scale, more regional groundwater conditions. Some of the piezometers continue to show the effects of nearby trial dewatering installations (pumping wells and horizontal drains), that have remained in operation beyond the initial trial periods. The initial effects of the 2012 dewatering system installations were also noted at some locations.

Table 2, below, presents the overall trends and the observations from 2012 for piezometer locations that were previously judged to be unlikely to be affected by the previous trial dewatering efforts, and were more reflective of general background subsurface groundwater patterns in West Quesnel. Some minor short term changes were noted in response to nearby 2012 monitoring well and/or pumping well installations, but the trends were not significant as the full scale pumping well system had not been activated during 2012.

Table 2: Background Piezometers – Overall Trend and 2012 Observations

Instrument	Background Groundwater Condition	2012 Observations
BH2	Steady-state at 485 m elevation	No significant change
BH2A	Steady-state at 502 m elevation	No significant change
BH2B	Steady-state at 506 m elevation	No significant change
BH2C	Steady-state at 508 m elevation	No significant change
BH4 SP(Voyageur School)	Highly variable with some seasonal response, collar destroyed in 2010	Destroyed, monitoring discontinued
BH4 VWP (Voyageur School)	Steady-state at 521 m elevation until sharp rise to 526 m elevation in April 2009	Steady-state at 526 m with slight seasonal groundwater response, a spike to 531.8 during BH 35 installation with a gradual dissipation to 527 m.
BH6A	Dry, sheared at 530 m elevation	Dry, monitoring discontinued
BH6B	Steady-state at 557 m elevation	No significant change
BH7A	Varies, 537 m to 537.5 m elevation, with seasonal precipitation response	Slight seasonal groundwater response to 537.5 m in spring, then decreasing to 537 m
BH7B	Varies, 535 m to 536 m elevation, with seasonal precipitation response	Slight seasonal groundwater response to 535.5 m in spring, then decreasing to 535 m
BH8A	Steady-state at 513 m elevation, intermittently dry	Dry
BH8B	Steady-state at 513 m elevation, intermittently dry	Dry
BH8C	Steady-state at 511 m elevation	No significant change
BH8D	Generally decreasing from above 508 m to 505 m elevation, with slight seasonal precipitation response	No seasonal response, generally still decreasing, at or slightly below 505 m
BH9A	Varies, 529.5 to 530.5 m elevation, with seasonal precipitation response	Seasonal groundwater rise to 530.5 m in the spring, a spike to 533 m during SI 17 installation with rapid dissipation to 529.5 m
BH9B	Varies, 530 to 531 m elevation, with seasonal precipitation variation	Seasonal groundwater rise to near 531 m in the spring, a spike to 537.5 m during SI 17 installation with a gradual dissipation to 531.5 m
BH9C	Generally decreasing from 531.5 to 529.5 m elevation, with slight seasonal precipitation response	Seasonal groundwater rise to near 530 m in the spring, a spike to 557.5 m during SI 17 installation with a gradual dissipation to 531 m
BH10A	Varies, gradually decreasing from 542.5 to 541 m elevation, with seasonal precipitation response	Seasonal groundwater response in the spring, from 542 to 542.5 m; fluctuations noted during PW 14 installation, development and pump test
BH10B	Varies, gradually decreasing from 542.5 to 541 m elevation, with seasonal precipitation response	Seasonal groundwater response in the spring, from 542 to 542.5 m; fluctuations noted during PW 14 installation, development and pump test
BH10C	Generally decreasing from 538.5 to 535 m elevation, with seasonal precipitation response	Very small fluctuations noted during PW 14 installation, development and pump test
BH11A	Steady-state at 517 m elevation	No significant change, possibly dry
BH11B	Steady-state at 515.5 m elevation	No significant change
BH11C	Slight decline 515 to 514.5 m elevation	No significant change

Table 2: Background Piezometers – Overall Trend and 2012 Observations cont'd

Instrument	Background Groundwater Condition	2012 Observations
BH13A	Generally decreasing from 481 to 479 m elevation	Decreasing from 479.5 to 479 m elevation with very small fluctuations for HD-9 install.
BH13B	Generally decreasing 482 to 481 m elevation	Steady-state at 481.5 m with very small fluctuations for HD-9 install.
BH14A	Varies, 566 to 568 m elevation, with seasonal precipitation response	Seasonal groundwater response in the spring, from 566.5 to 567.5 m. Dissipated to 566.5 m.
BH14B	Varies, 530 to 531 m elevation, with minimal seasonal precipitation response	No significant change
BH14C	Varies, 529 to 530 m elevation, with minimal seasonal precipitation response	No significant change
BH15A	Varies, 560 to 563 m elevation with strong seasonal and storm precipitation response	Seasonal groundwater response in the spring, from 560.5 to 563 m. Dissipated to 560.5 m.
BH15B	Gradual decrease (2 m difference to date from 540 to 538 m elevation)	Continuing gradual decrease
BH15C	Gradual decrease (3.5 m difference to date from 538 to 534.5 m elevation)	Continuing gradual decrease
BH16A	Gradual rise from 645 m to steady-state at 647 m elevation	No significant change
BH16B	Increasing (9 m difference to date from 580 to 589 m elevation) until August 2010, steady state until May 2012 then decreasing to 588 m.	Decreasing from 589 to 588 m.
BH16C	Steady-state at 550 m elevation	No significant change
BH16D	Slight variation above/below 550 m elevation	No significant change

Table 3 below, presents overall trends and observations for piezometers that are situated near the original trial pumping wells and may have been influenced by them. The piezometers nearest the trial pumping wells and closer to surface have experienced the greatest influence (draw-down of groundwater level) since pumping started and many have reached a new steady-state level (depending on how productive the pump has been, with PW4 producing the most water and PW5 the least). Piezometers that have groundwater pressures remaining at steady-state levels (with or without seasonal influences) are considered to be out of the radius of influence of the well or are too deep to be influenced. Some of the piezometers influenced by the pumping wells are also still reactive to seasonal precipitation. Generally in 2012 for this set of piezometers there were no significant changes, with steady state groundwater level draw-downs continuing where previously influenced by pumping wells. Some instrument locations indicated slight seasonal or storm event responses. However the VWP at BH3 shows a decrease in groundwater level subsequent to the installation of the new 2012 horizontal drains.

Table 3: Piezometers Near Trial Pumping Wells – Overall Trend and 2012 Observations

Instrument	Overall Groundwater Trend	2012 Observations
BH3 (near PW2)	Groundwater level varies 500 to 501 m elevation with seasonal precipitation response; level decreased to 499.5 m during trial dewatering (Oct 2007 – May 2009); level decreased to 498 m as a result of new horizontal drain installation in 2012	Decreasing from 500 to 498 m
BH3A (near PW1)	Decreased from start of pump trials in Nov. 2007 until mid-2009 (draw down of 3 m from 518.5 to 515.5 m elevation), steady-state since then at or near 515 m	No significant change
BH3B (near PW1)	Decreased from start of pump trials in Nov. 2007 until mid-2009 (draw down of 14.5 m from 518.5 to 504 m elevation), steady-state since then at or near 504 m	No significant change
BH3C (near PW1)	Decreasing from start of pump trials in Nov. 2007 until present (draw down of 12.5 m to date from 518.5 to 506 m elevation), steady-state since at or near 506 m	No significant change
BH4A (near PW1)	Steady-state at 516 m elevation with spikes due to precipitation events, no apparent influence from pumping	No significant change
BH4B (near PW1)	Steady-state at 516 m elevation with spikes due to precipitation events, no apparent influence from pumping	No significant change
BH4C (near PW1)	Steady-state at 515 m elevation, no apparent influence from pumping	No significant change
BH12A (near PW4)	Decreased from start of pump trials in Oct. 2007 until early 2008 (draw down of 7 m from 545 to below 538 m elevation), dry	No significant change, likely dry
BH12B (near PW4)	Decreased from start of pump trials in Oct. 2007 until early 2008 (draw down of 8 m from 545 to 537 m elevation), steady-state since then	No significant change
BH12C (near PW4)	Decreased from start of pump trials in Oct. 2007 until early 2008 (draw down of 7 m from 537 to 530 m elevation). Seasonal increase in the spring up to 532 m since June 2009	Seasonal groundwater increase in spring of 2012, from 531 to 532 m
BH12D (near PW4)	Steady-state at 526 m elevation, no apparent influence from pumping or seasonal precipitation response	No significant change
BH17A (near PW5)	Gradual decrease from start of pump trials in Oct. 2007 until present (possible draw down of 1 m to date from 484 to 483 m elevation) with seasonal precipitation response	No significant change to seasonal variation

Table 3: Piezometers Near Trial Pumping Wells – Overall Trend and 2012 Observations, cont'd

Instrument	Overall Groundwater Trend	2012 Observations
BH17B (near PW5)	Gradual decrease from start of pump trials in Oct. 2007 until present (possible draw down of 2.5 m to date from 483 to 480.5 m elevation) with seasonal precipitation response	No significant change to seasonal variation
BH18A (near PW5)	Gradual decrease from start of pump trials in Oct. 2007 until present (possible draw down of 1 m from 481 to 480 m elevation)	No significant change
BH18B (near PW5)	Not working	n/a
BH19A (near PW4)	Decreased from start of pump trials in Oct. 2007 until early 2008 (draw down of 4 m from 545 to 541 m elevation), steady-state since then	No significant change, possibly dry
BH19B (near PW4)	Decreased from start of pump trials in Oct. 2007 until early 2008 (draw down of 7 m from 545 to 538 m elevation), steady-state since then	No significant change
BH20 (near PW4)	Gradual decrease from start of pump trials in Oct. 2007 until early 2008 (possible draw down of 3 m from 545 to 542 m elevation), seasonal increases to 543 m	No significant change to seasonal variation

Table 4 below, presents the overall trends and observations from 2012 for piezometers situated above or near the original trial horizontal drain installations. These piezometers have generally been at steady-state although a few showed initial draw-down when the trial drains were first installed. A couple of these instruments react to seasonal precipitation, and some of them have shown significant lowering of water levels corresponding to the 2012 horizontal drain installations.

Table 4: Piezometers Near Trial Horizontal Drains – Overall Trend and 2012 Observations

Instrument	Overall Groundwater Trend	2012 Observations
BH21A (near HD4)	Groundwater level varies, 499 to 501 m elevation, with significant seasonal precipitation response	Seasonal increase to 500 m in the spring followed by decrease to 498 m in August after 2012 horizontal drain installations
BH21B (near HD4)	Varies, 500.5 to 501.5 m elevation, with seasonal precipitation response	Seasonal increase to 501 m in the spring followed by sharp decrease to 492 m in August after 2012 horizontal drain installations
BH22 (near HD4)	Varies, 504.5 to 505.5 m elevation, with seasonal precipitation response	Seasonal increase to 505 m in the spring followed by sharp decrease to 497.5 m in August after 2012 horizontal drain installations.
BH23A (near HD1)	Steady-state at 495 m elevation, no apparent seasonal influence	No significant change
BH23B (near HD1)	Gradual decrease since installation of horizontal drain in Nov. 2007 until mid-2010 (draw down of 6 m from 495 to 489 m elevation), steady-state since then, no seasonal precipitation response	Increase to 490.5 m in September during 2012 horizontal drain installations, followed by decrease to 489.5 elev.
BH24 (near HD1)	Decreased upon installation of horizontal drain in Nov. 2007 (draw down of 9 m from 501 below 492 m elevation), dry	Dry
BH25A (near HD1)	Varies, 500 to 501 m elevation, very slight seasonal precipitation response, no apparent influence from horizontal drains	No significant change
BH25B (near HD1)	Varies, 498 to 498.5 m elevation, with slight seasonal precipitation response, no apparent influence from horizontal drains	No significant change

In general, groundwater levels within the West Quesnel area have been considered to be generally quite high and detrimental to slope stability. The overall background trend observed in 2012 was that of a general steady state with a return to somewhat more noticeable seasonal groundwater increases that seemed to be missing in the previous year or two. Groundwater levels adjacent to and previously drawn down by trial dewatering pumping wells and horizontal drains continued to remain at or near their steady state lowered levels. However, some of the instruments showed significant response and lowering water levels due to the new horizontal drain installations that began halfway through the year. Some instruments also showed response due to drilling and testing of pumping or monitoring wells, but did not show any corresponding reductions as the pumping network has not yet been activated.

5.0 TRIAL PUMPING WELLS

During 2012, AMEC continued to monitor well levels and pump production for three of the four trial pumping wells from the 2007-2008 trial dewatering program (reported on by AMEC in May 2008) that are still in operation.

Figure 19 shows the locations of the trial pumping wells. PW1 is on Flamingo Street and has a 75 mm by 0.75 horsepower (hp) pump restricted to 15 L/min. PW2, on Abbott Drive, had a 75 mm by 0.75 hp pump restricted to 15 L/min. However, this pump stopped working in May 2009 and the pump remains in the well. PW4, on Panagrot Ave., has a 75 mm 2 hp pump restricted to 75 L/min. PW5 is located on Adam Street, with a 100 mm 0.75 hp pump restricted to 15 L/min.

PW1, PW2 and PW5 have electronic level controls to start and stop the pumps. PW4 is controlled by an ammeter that shuts off just prior to the pump cavitating (low head level) and restarts after a pre-set time period (20 min). The water pumped from PW1 enters the West Quesnel sanitary sewer while at PW2, PW4 and PW5, the water pumped enters the West Quesnel storm drainage system.

A summary table of the well details along with charts of well levels and production since installation can be found in Appendix D.

Table 5 presents the total annual flow and daily average flow for all of the pumping wells from 2008 to 2012.

Table 5: Trial Pumping Wells – Total Annual and Daily Average Flows

Year	PW1		PW2		PW4		PW5	
	Total Flow (L)	Daily Average Flow (L)	Total Flow (L)	Daily Average Flow (L)	Total Flow (L)	Daily Average Flow (L)	Total Flow (L)	Daily Average Flow (L)
2008	33,760	92	9,030	25	4,874,093	13,480	596	2
2009	17,256	47	3,975*	26*	4,985,579	13,649	711	2
2010	15,174	42	0	0	4,524,783	12,400	615	2
2011	13,869	38	0	0	6,144,984	16,836	1,134	3
2012	13,513	37	0	0	3,724,433	10,176	1,600	4

*Note: PW2 data from 2009 represents values collected prior to the pump failing in May 2009.

PW1 pumped at an average rate of 37 L/day during 2012, which is slightly lower than the rate observed in 2011. The total volume of water pumped, since installation through December 2012, was approximately 100,322 L. The water level in the well has mostly remained around 476 to 479 m elevation, as defined by the well level controls.

The pump at PW2 stopped working in May 2009 and has not been fixed or replaced since then. In mid 2009 the water level in the well stabilized at approximately 500 m elevation until mid September 2012. Thereafter, the water level in the well began to decrease, reaching 492 m elevation by the end of 2012. This drawdown appears to coincide with the installation of the 2012 horizontal drains.

PW4 has been the most productive trial well, with average pump rate of 10,176 L/day for 2012, which is lower than the average rate for 2011 but only slightly lower than the rates for the three previous years. To the end of December 2012, approximately 26.4 million L of water had been pumped from this well. The water level in the well remained between approximately 529 to 535 m depth, as defined by the well level controls.

PW5 has been the least productive trial well, with rates averaging around 3 L/day until August 2012. Starting in August 2012, the well became slightly more active, with average rates between 5 and 10 L/day, which are higher than previous trends but still fairly insignificant rates. In 2012, production occurred at least once in each month. To date, only about 4,749 L of water has been pumped. The water level in the well remained between 424 to 426 m elevation, as defined by the well level controls.

6.0 TRIAL HORIZONTAL DRAINS

During the fall of 2007, four trial horizontal (gravity) drains were installed at two different locations into the slope underlying West Quesnel (see Figure 19). This was part of the 2007-2008 trial dewatering program, reported on by AMEC in May 2008. Two of the drains (HD1a and HD1b) were located adjacent to SI-13 on the utility corridor south of the Sikh Temple. Although thought to have initially encountered water during installation, they were observed to be dry (at the discharge end) shortly after installation was complete. The other two drains (HD4a and HD4b) were installed west of Adam Street, near PW5. These drains have been producing water since installation. A summary table of the drains can be found in Appendix E, along with a production table for HD4. The production table for HD4 data prior to January 2009 was based on intermittent manual readings. These readings were averaged to produce the plot and calculate assumed volumes. A magnetic flow meter was installed in mid-December 2008 and since provides real-time data. The magnetic flow meter replaced a previously installed paddle-wheel type flow meter that worked only intermittently. Table 6 presents the total daily average flow observed for each of the four previous years (2008 to 2012).

Table 6: Trial Horizontal Drains – Total Annual and Daily Average Flows

Year	HD4	
	Total Annual Flow (L)	Daily Average Flow (L)
2008	1,049,757*	2,879
2009	536,501	1,489
2010	420,515	1,153
2011	432,021	1,184
2012**	448,585	1,226

*Note: 2008 HD4 flow values based on intermittent manual readings.

**Note: Flow meter plugged August to mid November 2012, no flow occurred.

HD4 produced a measured combined average flow from the two drains of 1,226 L/day during 2012, despite no flow occurring between August to mid November due to a plug in the outlet manifold. The plug is thought to have been caused by fine grained drilling mud from the drilling of the new horizontal drains directly adjacent to HD4. A maximum average daily flow rate, for the year, of 2014 L/day was recorded in April. The flow rates observed during 2012 steadily increased from those observed in the two previous years. To date, approximately 3.1 million L of water has been removed through the drains.

7.0 PRECIPITATION DATA

Appendix F contains various historical precipitation data charts for the Quesnel area. The primary source of information was precipitation data collected from Environment Canada (EC), for stations Quesnel AWOS¹ (prior to June 2010) and Quesnel¹ (from June 2010 on), which are located approximately 6 km north of the project site at the Quesnel airport. Total monthly and daily precipitation records, including 30 year climate normals, were obtained for the EC station.

A secondary planned source of precipitation data was from the custom-installed local weather station on the roof of an apartment building within the West Quesnel Land Stability Program area by Urban Systems Ltd. However, daily total precipitation data has been available from the Urban Systems' station only on an intermittent basis since June 2006. The intention of installing the custom local weather station was to try to discern if there were significant differences in total precipitation patterns between the EC station and the West Quesnel area. Unfortunately AMEC was unable to access the Urban System's station data at the time of this report (due to system malfunctions that have yet to be resolved) and accordingly cannot present the corresponding 2012 data. AMEC recommends that the Urban System station be fixed as soon as possible.

From previous data, it appears that while generally both stations record the same significant precipitation events, the EC station recorded a higher level of total precipitation. While this discrepancy may suggest that the West Quesnel area is drier than the Quesnel Airport, a significant portion of this difference is due to equipment outages at the Urban Systems station. In addition, the discrepancy may also be due to a non-standard layout for the Urban Systems' equipment (being on an apartment roof, as compared to that used for the EC station), which could affect the capture of both rain and snowfall precipitation. Consequently, AMEC has decided to rely on the more complete EC total precipitation data for analysis of the West Quesnel area for the 2012 monitoring period.

Total annual precipitation recorded at the EC weather station for 2012 was 427 mm, which is roughly 21% lower than the historical normal² (1971 to 2000) which is taken as 540 mm for January to the end of December. Generally, 2012 was wetter than normal from April to July but was drier than normal for the remainder of the year. Table 7, below, presents the annual total precipitation from 1996 to 2012. Figure F1, in Appendix F, presents total monthly precipitation since June 2006. Figures F2 and F3 show cumulative total monthly precipitation and total monthly precipitation versus the historical normal since 1976, respectively. Figure F4 shows the cumulative difference between the actual recorded precipitation and the 30-year normal since 1976. Upward slopes in the cumulative difference graph represent wet trends, while downward slopes are drying trends. Normal precipitation is observed when the cumulative difference plot remains relatively horizontal. 2012 appeared to represent a cessation of a drying trend noted from 2007 through 2010 and possible return to more normal precipitation pattern, even if still slightly below the long term normal.

2011	450	-90
2012	427	-113

8.0 TRENDS & CORRELATIONS

Selected data from different types of instrumentation was plotted to determine if any general trends or correlations were apparent. While 2007-2012 still represents the early stages of availability of relatively comprehensive data sets across the study area, several trends were visible. Charts of these comparisons can be found in Appendix G.

The comparisons in different types of data, to be discussed below, are as follows:

- Total monthly precipitation vs. groundwater elevation (Figure G1)
- Cumulative total daily precipitation vs. groundwater elevation (Figure G2)
- Incremental ground movement rate vs. total monthly precipitation (Figure G3)
- Incremental ground movement rate vs. total seasonal precipitation (Figure G4)
- Cumulative ground movement vs. total monthly precipitation (Figure G5)
- Incremental ground movement rate vs. cumulative difference total monthly precipitation (Figure G6)
- Incremental ground movement rate vs. groundwater elevation (Figure G7)
- Cumulative ground movement vs. groundwater elevation (Figure G8)
- Horizontal Movement Relative to Precipitation (Figure G9)

8.1 PRECIPITATION EFFECT ON GROUNDWATER LEVELS

On Figure G1, when total monthly precipitation is compared to general groundwater elevation (as determined from selected vibrating wire piezometers unlikely to have been affected by trial dewatering); it is apparent that significant seasonal rises in groundwater level occur just after winter each year. These rises can be seen on all the instruments except BH4 VWP in 2012.

When these same groundwater elevations are plotted against cumulative total daily precipitation (see Figure G2), a steep rise in the cumulative precipitation curve is often, but not always, followed by a rise in groundwater levels in some of the piezometers. In the other cases, observed rises in groundwater levels are not directly or immediately correlated to preceding rises in the cumulative precipitation plot. There is likely an over-riding and complicated time-lag effect of infiltration of previous rainfall or snow melt (during frozen/non-frozen and dry/saturated ground conditions) on groundwater levels. There may also be additional factors operating such as infiltration variability depending on surface moisture conditions and near surface groundwater conditions, lawn watering, variable losses from sewers and water systems and other unknown factors. In addition, in other slides, the degree of infiltration has been found to vary with slide movement closing and opening tension areas combined with surface water and shallow groundwater flow paths. However, generally for 2012 there was an observed seasonal spring increase in background groundwater levels that likely corresponded with increased precipitation and/or infiltration of snow melt during the early part of the year.

8.2 PRECIPITATION EFFECT ON GROUND MOVEMENT

Cumulative total ground movement and movement rates (as determined from selected representative SI and horizontal GPS movement data) were plotted against various precipitation data (see Figures G3 to G6). A general correlation between ground movement and seasonal precipitation patterns can be discerned, with more observed movement generally occurring or following wetter years or wetter seasons within a given year. The observed reduced rate and amount of movement in 2010 and 2011 correlates with generally declining total precipitation, starting around mid 2009 until the spring of 2011. Slightly higher amounts in movement in 2012 appear to correspond with an apparent return towards more normal historical precipitation rates, or at least a cessation of the previously noted drying trend.

8.3 GROUNDWATER LEVEL CORRELATION WITH GROUND MOVEMENT

Figure G7 plots groundwater elevation versus ground movement rates (velocity, as determined from selected SI and horizontal GPS movement data). Peaks in movement rates typically occurred in the late spring. There was a time lag observed between the increase in groundwater levels and the maximum movement rate and this time lag appears relatively consistent (approximately 1.5 to 2 months) within the six years of data plotted. It is important to note that this time lag is not absolute, as the GPS based movement data is collected only quarterly and thus provides only very coarse resolution. In the May 2007 report, AMEC observed that groundwater elevations correlated to slide movement rates. Similar correlations are present in the current data set.

The cumulative ground movement (horizontal movement only) was plotted against groundwater elevation (see Figure G8) using the same piezometer data as in Figure G7. The annual ground movement appears to begin around the same time as the groundwater levels rise (during spring), although the ground movement continues beyond the rise in groundwater levels. As with the previous chart, it is important to note that the time frames are not absolute, as the movement data is collected only quarterly and thus provides only very coarse resolution.

What is apparent from both Figures G7 and G8 is that increased ground movements are strongly correlated with seasonal increases in monitored groundwater levels. The somewhat increased ground movements observed in 2012 (as compared to the lower movement rates observed in 2010 and 2011 that followed lower than normal precipitation years) appear to be attributable to some slightly higher seasonal groundwater pressures experienced in 2011 and

early 2012, even though the total annual precipitation levels in 2011 and 2012 were still slightly below normal. As noted in previous annual reporting there appears to be a time-lag of approximately one year between increased precipitation and increased groundwater pressures and resulting ground movement. Preliminary indications from the data suggest that there is a stronger correlation between the expected amount of ground movements in any given year with the total precipitation experienced in say the period 12 to 24 months prior, rather than with total precipitation experienced in the immediate 12 months prior. Figure G9 illustrates this time lag effect.

Figure G9 - Horizontal Movement Relative to Precipitation

9.0 CLOSURE

This report presents the results of the annual monitoring carried out by AMEC for the 2012 calendar year. It is recommended and anticipated that monitoring will continue through 2013 and beyond. AMEC will be providing a work plan and estimate for the 2013 annual monitoring program under separate cover.

This report has been prepared for the exclusive use of the City of Quesnel and their representatives for specific application to West Quesnel Land Stability Program. Any use which a third party makes of this report, or any reliance on or decisions made based on it, are the responsibility of such third parties. AMEC accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

This report was prepared in accordance with generally accepted geotechnical engineering principles and practice. No other warranty, expressed or implied, is made.

GPS Movement Hubs - Summary Table and Survey Data

APPENDIX A - GPS Movement Hubs Status

Hub	Location	Initial Survey Date	Status
98-02	Donnelly/Dodds Intersection	September 1998	Active
98-04	Picard Place (Lane)	September 1998	Destroyed - replaced by 08-02
98-05	East of Dawson/Lewis Intersection	September 1998	Active
98-06	Paley West	September 1998	Active
98-07	Paley East	September 1998	Active - minor disturbance/deterioration
98-08	Picard Avenue	September 1998	Active
98-09	Lane between Patchett/Pierce	September 1998	Active
98-14	Pentland/Flamingo Intersection	September 1998	Active
98-15	Palmer/Lewis Intersection	September 1998	Active
98-16	Healy Road	September 1998	Active
98-17	Bettcher/Lark Intersection	September 1998	Active
98-18	Lark/Flamingo Intersection	September 1998	Active
98-19	Abbott/Flamingo Intersection	September 1998	Active
98-20	Hawk Street @ Crane Ave.	September 1998	Active
98-21	Lane between Avery/Allison	September 1998	Active
98-22	Lane between Beath/Bouchie	September 1998	Active
98-23	Doherty Dr. - BM	September 1998	Active
98-24	Salton Road (Hixon Road)	September 1998	Not Currently Read
98-26	Benchmark by Airport - BM	September 1998	Not Currently Read
98-28	Red Bluff Pump Station - BM	September 1998	Not Currently Read
98-29	Quesnel Hill	September 1998	Not Currently Read
01-30	West End of Dodds Avenue at Finley Road	December 2001	Active
01-31	Blair Street	December 2001	Active
01-32	Lewis Drive/Beabien Avenue	December 2001	Active
01-33	South End of Allard Street	December 2001	Active
01-34	Abbott Road and Blair Street	December 2001	Active
01-35	Lewis Drive North of Couldwell Street	December 2001	Active
01-36	Anderson Drive at Abbott Drive	December 2001	Active
01-37	Dawson Street at Abbott Drive	December 2001	Active
01-38	Quesnel No. 1 Station - BM	December 2001	Active - Benchmark Station
01-39	Anderson Avenue at Wade Avenue	December 2001	Active
01-40	Lewis Drive East of Healy Street	December 2001	Active
82C256	Government Benchmark at Airport	December 1998	Not Currently Read
WaterTank	Water Tank	March 2006	Active - Benchmark Station
06-01	End alley E. of Anderson Dr., opposite school	November 2006	Not Currently Read
06-02	East side Anderson Drive by school	November 2006	Active
06-03	West side Anderson Dr., opposite school yard	November 2006	Active
06-04	North side Wade Ave, one lot E. Anderson Dr.	November 2006	Active
06-05	Anderson Drive west side, one lot S. of Avison	November 2006	Active
06-06	North corner Avery Ave / Anderson Drive	November 2006	Active - minor disturbance/deterioration
06-07	NE. corner Boyd Street / Abbott Rd.	November 2006	Active
06-08	North side Abbott Road., alley E. Beath Street	November 2006	Active
06-09	East side Bouchie Street	November 2006	Active - minor disturbance/deterioration
06-10	South side Broughton Avenue	November 2006	Destroyed
06-11	East side Lewis Road, opposite house # 391	November 2006	Active
06-12	East side Lewis Road, opposite house # 547	November 2006	Active
06-13	NW. corner Pentland Crescent	November 2006	Active
06-14	SW. corner Pinchbeck Street / Pentland Crescent	November 2006	Active - minor disturbance/deterioration
06-15	By trail, NW unnamed Rd. N. Dixon St.	November 2006	Active - minor disturbance/deterioration
06-16	By end trail, NW unnamed road N. Dixon St.	November 2006	Active
06-17	In clearing, NW of end Findlay Road	November 2006	Disturbed - replaced by 08-01
06-18	On upper bench by trail, off end Findlay Road	November 2006	Destroyed
06-19	West side Abbott Dr. 100m south last house	November 2006	Active
06-20	End of trail, by BH 16, off end Abbott Drive	November 2006	Active
06-21	100m past gate, off end Abbott Drive	November 2006	Active
08-01	In clearing, NW of end Findlay Road	June 2008	Active
08-02	Picard Place (Lane)	August 2008	Active
11-50	South of Abbott Dr. & Hawk St.	June 2011	Not Currently Read
11-51	North End Bouchie St.	June 2011	Not Currently Read
11-52	Lane between Avison & Avery Ave.	June 2011	Not Currently Read
Baker	Control Point at 2191 Baker Drive	June 2011	Not Currently Read

Appendix B

Slope Inclinometers - Summary Table

APPENDIX B - Slope Inclinometer Status

SI	Location	Initial Reading Date	Status	Displacement
SI-1	Avery Lane	November 2000	Blocked at 40m between Apr-June 2008	23mm*
SI-2	Avery Lane	November 2000	Blocked at 41m between Nov. 04-Apr. 05	86mm*
SI-3	Abbott Dr. & Bettcher St.	November 2000	Blocked at 39m between May-Nov. 2002	61mm*
SI-4	Voyager School	November 2000	Blocked at 51m between May-Nov. 2002	59mm*
SI-5	Abbott Dr. (near Flamingo)	October 2000	Blocked at 35m between Dec. 03-June 04	13mm*
SI-6	Dixon St.	November 2000	Blocked at 78m between Nov 01-May 02	83mm*
SI-7	Pierce Cres.	November 2000	Blocked at 68m between May-Nov. 2002	73mm*
SI-8	Pinchbeck St.	June 2005	Active - no movement (SI not deep enough)	0mm
SI-9	Patchett St.	April 2005	Blocked at 65m between Nov. 08-Apr. 09	110mm*
SI-10	Dawson St.	April 2005	Blocked at 21m between June 05-May 06	12mm*
SI-11	Picard Ave.	May 2005	Active - no movement (SI not deep enough)	0mm
SI-12	Panagrot Ave. (east end)	April 2005	Blocked at 63m between Mar.-May 2007	47mm*
SI-13	Lewis Dr. (at Sikh Temple)	April 2005	Blocked at 13m between June-Sept. 2008	72mm*
SI-14	Findlay Rd.	November 2006	Blocked at 20m between Nov. 08-Apr. 09	62mm*
SI-15	Panagrot Ave. (west end)	November 2006	Blocked at 18m between Apr.-June 09	56mm*

* Displacements are reported from last reading before SI blocked

Appendix C

Piezometers - Summary Table and Groundwater Elevation Plots

APPENDIX C - Piezometer Status

Standpipe Piezometers					
Piezometer	Datalogger Station	Location	Installation Date	Depth (screen)	Status
BH2	STN01	Avery Lane	November 2001	54.2 to 60.2m	Active
BH2A	STN05	Bettcher St.	August 2003	86.9-88.4m	Active
BH2B	STN05	Bettcher St.	August 2003	47.4-48.2m	Active
BH2C	STN05	Bettcher St.	August 2003	25.3-25.9m	Active
BH3A	STN06	Flamingo St.	July 2003	50.0-50.6m	Active
BH4C	STN06	Flamingo St.	July 2003	22.9-23.5m	Active
BH4 SP	STN03	Voyager School	December 2001	39.6-39.9m	Damaged and plugged
BH6A	STN04	Dixon St.	December 2001	44.0-45.2m	Damaged - sheared at 26.8m
BH6B	STN04	Dixon St.	December 2001	26.4-27.8m	Active

Standpipe Piezometers with Vibrating Wires					
Piezometer		Location	Installation Date	Depth (tip)	Status
BH3B	STN06	Flamingo St.	August 2003	40.0m	Active
BH3C	STN06	Flamingo St.	August 2003	31.0m	Active
BH4A	STN06	Flamingo St.	July 2003	40.0m	Active
BH4B	STN06	Flamingo St.	July 2003	23.0m	Active

Vibrating Wire Piezometers					
Piezometer	Datalogger Station	Location	Installation Date	Depth (tip)	Status
BH3	STN02	Abbott Dr.	November 2001	37.5m	Active
BH4 VWP	STN03	Voyager School	December 2001	49.0m	Active
BH7A	STN07	Pierce Cres.	July 2005	27.0m	Active
BH7B	STN07	Pierce Cres.	July 2005	64.9m	Active
BH8A	STN08	Pinchbeck St.	June 2005	13.1m	Dry
BH8B	STN08	Pinchbeck St.	June 2005	13.0m	Dry
BH8C	STN08	Pinchbeck St.	June 2005	28.0m	Active
BH8D	STN08	Pinchbeck St.	June 2005	56.2m	Active
BH9A	STN09	Patchett St.	June 2005	15.1m	Active
BH9B	STN09	Patchett St.	June 2005	30.6m	Active
BH9C	STN09	Patchett St.	June 2005	50.1m	Active
BH10A	STN10	Dawson St.	July 2005	11.6m	Active
BH10B	STN10	Dawson St.	July 2005	20.4m	Active
BH10C	STN10	Dawson St.	July 2005	48.6m	Active
BH11A	STN11	Picard Ave.	June 2005	14.3m	Active
BH11B	STN11	Picard Ave.	June 2005	32.0m	Active
BH11C	STN11	Picard Ave.	June 2005	50.3m	Active
BH12A	STN16	Panagrot Ave. (east end)	June 2005	18.0m	Active
BH12B	STN16	Panagrot Ave. (east end)	June 2005	22.9m	Active
BH12C	STN16	Panagrot Ave. (east end)	June 2005	26.5m	Dry
BH12D	STN16	Panagrot Ave. (east end)	June 2005	54.9m	Active
BH13A	STN12	Lewis Dr. (at Sikh Temple)	July 2005	51.1m	Active
BH13B	STN12	Lewis Dr. (at Sikh Temple)	July 2005	14.4m	Active
BH14A	STN13	Findlay Rd.	June 2006	20.1m	Active
BH14B	STN13	Findlay Rd.	June 2006	65.9m	Active
BH14C	STN13	Findlay Rd.	June 2006	98.7m	Active
BH15A	STN14	Panagrot Ave. (west end)	July 2006	8.8m	Active
BH15B	STN14	Panagrot Ave. (west end)	July 2006	63.3m	Active
BH15C	STN14	Panagrot Ave. (west end)	July 2006	83.2m	Active

Vibrating Wire Piezometers cont.					
BH16A	STN15	Diatomite Mine	October 2006	42.7m	Active
BH16B	STN15	Diatomite Mine	October 2006	85.5m	Active
BH16C	STN15	Diatomite Mine	October 2006	139.1m	Active
BH16D	STN15	Diatomite Mine	October 2006	214.9m	Active
BH17A	STN17	Adam St.	July 2007	37.7m	Active
BH17B	STN17	Adam St.	July 2007	57.4m	Active
BH18A	STN17	Adam St.	July 2007	38.2m	Active
BH18B	STN17	Adam St.	July 2007	60.1m	Not currently giving readings
BH19A	STN16	Panagrot Ave. (east end)	July 2007	16.5m	Active
BH19B	STN16	Panagrot Ave. (east end)	July 2007	22.3m	Active
BH20	STN16	Panagrot Ave. (east end)	July 2007	21.4m	Active
BH21A	STN19	Crane St.	July 2007	12.6m	Active
BH21B	STN19	Crane St.	July 2007	21.3m	Active
BH22	STN19	Crane St.	July 2007	18.3m	Active
BH23A	STN18	Baity Ave.	July 2007	22.4m	Active
BH23B	STN18	Baity Ave.	July 2007	33.1m	Active
BH24	STN18	Baity Ave.	July 2007	22.9m	Dry
BH25A	STN18	Baity Ave.	July 2007	16.8m	Active
BH25B	STN18	Baity Ave.	July 2007	30.2m	Active

Appendix D

Trial Pumping Wells - Summary Table and Production Charts

APPENDIX D - Pumping Well Status

Well	Location	Installation Date	Depth (Screen)	Depth (Pump)	Depth (VW tip)	Monitoring Wells	Status
PW1	Flamingo St.	September 2003	29.9-47.5m	45.0m	44.3m	BH3bc, BH4ab	Active - water controls at 39.5m and 43.0m
PW2	Abbott Dr.	September 2003	30.0-55.0m	43.0m	42.4m	BH3	Inactive - pump not working
PW4	Panagrot Ave. (east end)	June 2007	6.1-30.5m	29.0m	28.3m	BH12, BH19, BH20	Active - pump controlled by ammeter
PW5	Adam St.	June 2007	42.7-61.0m	58.5m	57.9m	BH17, BH18	Active - water controls at 55.3m and 57.4m

PW1 - TOTAL DAILY FLOW AND WELL LEVEL

PW2 - TOTAL DAILY FLOW AND WELL LEVEL

PW4 - TOTAL DAILY FLOW AND WELL LEVEL

PW5 - TOTAL DAILY FLOW AND WELL LEVEL

Averaged Daily Flow Rate and Monthly Discharged Volume for PW1

Averaged Daily Flow Rate and Monthly Discharged Volume for PW4

Averaged Daily Flow Rate and Monthly Discharged Volume for PW5

Appendix E

Trial Horizontal Drains - Summary Table and Production Chart

APPENDIX E - Horizontal Drain Status

HD	Location	Installation Date	Length (total/slotted)	Azimuth	Inclination	Monitoring Wells	Status
HD1a	Lewis Dr. (at Sikh Temple)	November 2007	64.0m/57.9m	271	+2°	BH23, BH24, BH25	Active - dry
HD1b	Lewis Dr. (at Sikh Temple)	November 2007	48.8m/42.7m	241	+1°	BH23, BH24, BH26	Active - dry
HD4a	Adam St.	October 2007	135.6m/129.5m	271	+2°	BH21, BH22	Active
HD4b	Adam St.	November 2007	45.7m/39.6m	271	-2°	BH21, BH22	Active

Averaged Daily Flow Rate and Monthly Discharged Volume for HD4

Appendix F

Historical Precipitation Data Charts for the Quesnel Area Figures F1 to F4

**Figure F1 - Total Monthly Precipitation
(Environment Canada-Quesnel Station)**

Figure F2 - Cumulative Total Monthly Precipitation
(Environment Canada-Quesnel Station)

**Figure F3 - Total Monthly Precipitation - 2008 to 2012
(Environment Canada - Quesnel)**

**Figure F4 - Total Monthly Precipitation - Cumulative Difference - 1976 to 2012
(Environment Canada - Quesnel)**

$$\text{Cumulative Difference} = \sum((\text{Total Monthly Precipitation}) - (30\text{-Year Monthly Moving Average}))$$

Appendix G
Data Comparison Charts
Figures G1 to G9

Figure G1 - Total Monthly Precipitation (Quesnel) vs. Groundwater Elevation

Figure G2 - Cumulative Total Daily Precipitation (Quesnel) vs. Groundwater Elevation

**Figure G3 - Incremental Ground Movement Rate vs.
Total Monthly Precipitation (Quesnel)**

Figure G4 - Incremental Ground Movement Rate vs.
Total Seasonal Precipitation (Quesnel)

Figure G5 - Cumulative Ground Movement vs. Total Monthly Precipitation (Quesnel)

Figure G6 - Incremental Ground Movement Rate vs.
Cumulative Difference - Total Monthly Precipitation (Quesnel)

Figure G7 - Incremental Ground Movement Rate vs. Groundwater Elevation

Figure G8 - Cumulative Ground Movement vs. Groundwater Elevation

Figure G9 - Horizontal Movement Relative to Precipitation
